The shaft is supported at its ends by two bearings $A$ and $B$ and is subjected to the forces applied to the pulleys fixed to the shaft. Determine the resultant internal loadings acting on the cross section at point $C$. The $400-\mathrm{N}$ forces act in the $-z$ direction and the $200-\mathrm{N}$ and $80-\mathrm{N}$ forces act in the $+y$ direction. The journal bearings at $A$ and $B$ exert only $y$ and $z$ components of force on the shaft.
