

## CONTENTS

This Online Test Bank is designed to accompany *College Algebra: Graphs and Models, 6e* by Bittinger/Beecher/Ellenbogen/Penna.

There are six alternate forms for each chapter test and the final examination. Alternate Forms A, B, C, and D are equivalent in length and difficulty. Synthesis questions occur at the end of the Form, and are separated from the rest of the questions by a solid line. Synthesis questions are meant to be more challenging than the previous questions, like those problems found in the last part of each exercise set in the text. The synthesis questions have been placed at the end to make it easy to omit them if the instructor wishes to do so.

All questions on Forms E and F are multiple choice. Effort was made to make the wrong answers as logically wrong as possible. In most cases answers were constructed to avoid students doing backward reasoning.

NAME \_\_\_\_\_

TEST FORM A

CLASS \_\_\_\_\_ SCORE \_\_\_\_\_ GRADE \_\_\_\_\_

1. Determine whether the ordered pair  $\left(\frac{1}{2}, -\frac{3}{4}\right)$  is a solution of the equation  $4x - 5 = 4y$ .

2. Find the intercepts of  $x - 4y = 4$  and graph the line.

3. Find the distance between  $(4, -6)$  and  $(-7, -9)$ .
4. Find the midpoint of the segment with endpoints  $(4, -6)$  and  $(-3, -12)$ .
5. Find the center and the radius of the circle  $(x + 6)^2 + y^2 = 9$ .
6. Find an equation of the circle with center  $(-8, -4)$  and radius  $\sqrt{6}$ .
7. a) Determine whether the relation  $\{(-5, 5), (-4, 4), (3, -3), (1, 1)\}$  is a function. Answer yes or no.  
 b) Find the domain of the relation.  
 c) Find the range of the relation.
8. Given that  $f(x) = x^2 + 3x - 4$ , find each of the following.  
 a)  $f(-2)$                                       b)  $f(a + 5)$
9. Given that  $f(x) = \frac{4 + x}{2x}$ , find each of the following.  
 a)  $f(-2)$                                       b)  $f(0)$
